DBMS LAB PROJECT 2022-23

NAME: SUMIT PATEL

ROLL NO: 20MA20058

About designed ERP system:

In this system I have designed and developed for two stakeholders

1st one is student can access student section.

2nd one for Admin/faculty section.

And how are they controlled and their data recorded in IIT kgp's database system

The primary goal of the project was to create an all-encompassing system that would supply real-time data and insights to staff and students alike. This report serves to give a comprehensive summary of the project's scope, methodology, and implementation, including details on the testing procedures. Moreover, the report will delve into the difficulties encountered during the development phase and the key takeaways from the project. Finally, recommendations for how to enhance and improve the ERP system in the future will be provided. In this ERP System I have divided the system into administrative and student's part.

a) First step is to register for new user in "Register" section of site. if user don't have registered and tried to login an "Error" will pop up.

c) Registration can be done using two different stakeholders for overlook on full features of site.

Stakeholder type	Institute Employee Institute Employee Student	
Roll number/login-id	ROLL NO/EMPLOYEE NUMBER	
Password	SET-PASSWORD	
First Name	ENTER FIRST-NAME	

d)

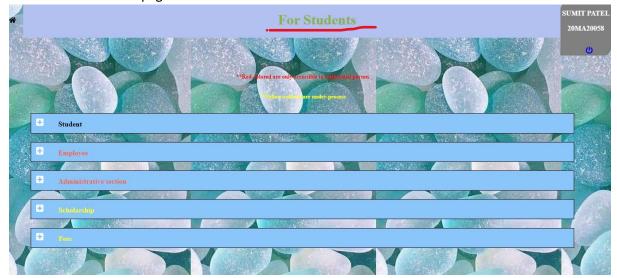

e) After registering user can "Login".

f)

h)

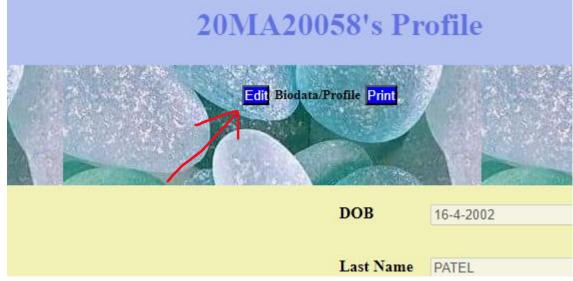

g) If stakeholder is student has logged in into the website using their credentials, they will reach their ERP home page.

- i) Home page may contain various section student is only allowed to authorized section which are student which is functioning section and scholarship and fees are not functioning yet but they are accessible by student.
- j) Your Academic Information further contains the student's Roll No., Name, profile which contains student's profile in it, the performance of the student in all the semesters. With further ado, let's explain all the sections in the Academic Information as follows:
 - (i) Roll number is unique and used as unique key in database.
 - (ii) <u>Name</u> corresponding name of user.
 - (iii) <u>Profile</u> contains information of user where user can "edit" by clicking "edit" button and "save" and can also "print".

(v) To edit personal information

(vii) To save personal information after editing.

(vi)

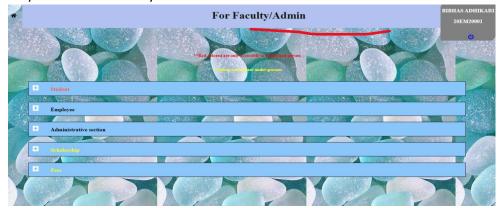

(viii) DOR 16.4.2003

- (ix) The performance of the student in various academic and extracurricular activities should be recorded in the ERP system. This includes grades of the student, attendance throughout the whole semester, participation in sports and cultural events, and any disciplinary actions taken by the institute against the student.
- (x) The registration card is an important document that contains information about the student's course registration, semester-wise performance, their semester grades and points, their overall grades and points and their attendance. The ERP system generate the registration card automatically after the result of the student is feeded in it and update it regularly.
- (xi) Each student has a faculty advisor assigned to them. The faculty advisor is responsible for guiding the student in their academic journey and helping them with any academic or personal issues they may face. This ERP system maintain a record of the faculty advisor assigned to each student.

k) Time-table section student can look on his time table.

	distribution to				She was to be			S + + 1 0	
		,		Your TimeTable fo	r SPRING 2022-2023

m) If Faculty/Admin has logged in ,then the user has same option as for student. But allowed to only admin sections only.

- (i) Access to Personal Information: Faculty has access to personal information himself and of all student, but he can not edit student personal data.
- (ii) Search and Delete Functionality: The faculty/admin of the ERP system may also have access to search and delete a particular student's data by using student ID (roll no). This functionality can be useful in cases where a student has withdrawn from the institution or if their data needs to be updated. However, it is important to exercise caution when using this functionality. The faculty/admin must ensure that they have the proper authorization to delete a student's data and that they are not violating any privacy laws or regulations.

(iii) Searching-

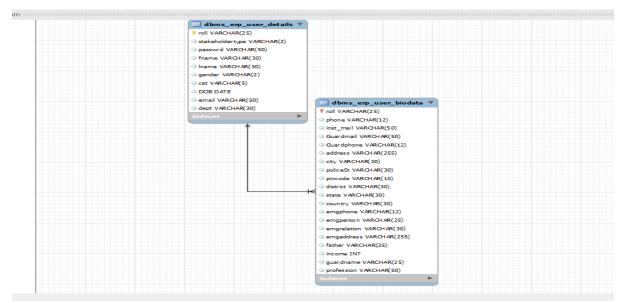

(iv) Deleting

Technical library/framework/features used in Project

a) FOR DATABASE

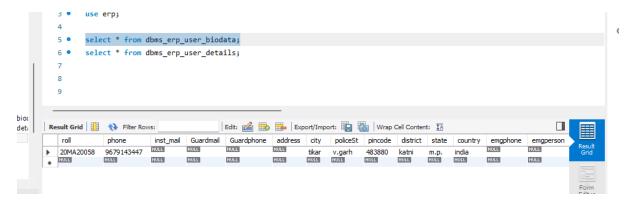

- b) MySQL has been used and two tables
 - 1 for user identy store.
 - 2 for storing user biodata.
 - And foreign key was ID number of user.
- c) For Backend
- d) Fully mounted on node js framework using JavaScript .
- e) For SQL query mysql/mysql2 library has been used for query handelling (CRUD method).
- f) For Frontend

- g) React JS is used to build with javascript and various library and packages supported on react.
- h) Styling of website designed by "styled" package of react.
- i) For connecting with backend "axios" package has been used.
- j) React-Router-Dom, React-Router is used to link the pages
- k) The above functionalities are included in the client-side of the website
- For the server-side Node JS is used to create backend of the website and connect the MySQL server to out host computer
- m) When a user registers his info on the ERP it gets stored in a table named user details in DBMS Database and we can access the whole data of the students from there.
- n) Below is the attached screenshot of user details table.
- o) For user login credential (for identification) table

for biodata table

Thank you
